

Day - 06

Jira: Jira is a tool used for project management and issue tracking.

components:

Epic: Large body of work that cannot be delivered in a single iteration and Epics are large work items.

Story: Smallest unit of work that contains acceptance Criteria, DoR, DOD and we create Subtasks under story to track level status.

Spike: Created when research (or) investigation is needed before picking a story into Sprint

Bug: defect in the application that has to be fixed.

Jira

Sprint board:

To-do: Tasks that are prepared and yet to be started.

In-progress: Tasks that are currently being worked.

Ready to accept: Tasks that are completed but waiting for review/acceptance.

Done: Tasks that are completed.

## Reports in Jira

### (\*) Velocity Report:

Shows the no. of points Committed and the no. of points Completed during sprint.

### (\*) Time-tracking report:

-tracks the time spent on various tasks

### (\*) Resolution time

measures the time taken for resolving issues

### (\*) Recently Created issue report:

lists the issues resolved to those created within a particular time frame

### (\*) Defect Density report!

It measures the no. of defects relative to size of Software Component
